Abkürzungen

KA: schriftliche Klausur / written exam

MP: mündliche Prüfung / oral examination

AP: alternative Prüfungsleistung / alternative examination

PVL: Prüfungsvorleistung / prerequisite

MP/KA: mündliche oder schriftliche Prüfungsleistung (abhängig von Teilnehmerzahl) / written or oral examination (dependent on number of students)

SS, SoSe: Sommersemester / sommer semester

WS, WiSe: Wintersemester / winter semester

SX: Lehrveranstaltung in Semester X des Moduls / lecture in module semester x

SWS: Semesterwochenstunden

Module Name:	Applied Engineering Geology and Brownfield Revitalisation		
(English):			
Responsible:	Tamáskovics, Nándor / Dr.		
Lecturer(s):	Tamáskovics, Nándor / Dr.		
Institute(s):	Institute of Geotechnics		
Duration:	1 Semester(s)		
Competencies:	Participants get the qualification to gain knowledge of the scientific field of engineering geology, including methods to evaluate soil and groundwater contaminated sites, learn to apply an interdisciplinary approach focussing on technique, economy, ecology and environmental law. The additional goal is to acquire the specific knowledge of a Brownfield Manager.

Data:	INTLAW1. MA. Nr. 2902 / Examination number: 61514	Version: 14.07.2016 	Start Year: WiSe 2016
Module Name:	Aspects of the International Law of Resources & Environment 1		
(English):			
Responsible:	Jaeckel, Liv / Prof.		
Lecturer(s):	Albrecht, Maria		
Institute(s):	Professor of Public and Environmental Law		
Duration:	1 Semester(s)		
Competencies:	The purpose of the cluster is to give an introduction to the basic terms of law and to legal problems related to resources and environment. Students without a law background will be enabled to understand the characteristics of these fields as such, before turning to a range of more specific questions. After completion of the cluster, students should be able to identify the legal issues of simple cases in the fields of law and to decide on them using the established legal methods.		
Contents:	<p>1. General Introduction to Law This part contains the basic legal terms, the introduction to the different fields of law and the interpretation of law.</p> <p>2. Introduction to International and International environmental Law Problems of allocation of resources between states and international environmental problems will be discussed.</p> <p>3. The topics 1 and 2 will also be presented by presented by discussing cases (seminar).</p>

Module Name:	Environmental Management and Policies		
(English):			
Responsible:	Fröhling, Magnus / Prof.		
Lecturer(s):	Fröhling, Magnus / Prof.		
Institute(s):	Professor of Ressourcemanagement		
Duration:	1 Semester(s)		
Competencies:	Students are able to identify and explain environmental issues accruing in companies. They explain the origin of environmental impacts, the framework which has to be considered and are able to apply selected methods and tools to solve (simplified) problems accruing in practice. They discuss the status of these methods and tools with regard to real problem instances and the current scientific literature and political discussion.		
Contents:	<p>The course covers among others:</p> <ul style="list-style-type: none"> • Environmental impacts of industrial and business activities, • Societal, economic and legal frameworks of environmental protection, • Environmental Management Systems, and • Methods and tools of Cleaner Production.

Duration:	1 Semester(s)		
Competencies:	The course intends to give students the knowledge and the ability to perform scientific database research. Furthermore they will be able to structure and document their scientific work and results. Also they learn more about scientific writing (of a paper), as well as to present and defence their results (oral talk). This is very important before writing their MSc-thesis.		
Contents:	<ul style="list-style-type: none"> - dealing with scientific literature - Detailed database research, - citation of publications, - aspects about writing technical or review papers - structure your practical work in relation to the Master thesis (deal with sub-aspects) - Main ideas how to structure the written MSc-thesis in comparison to technical reports - dealing with the resources of the university library - search papers, therefore searching strategies <p>Oral communication (language of describing graphs, charts and diagrams)</p> <p>Argumentation line of talks</p> <p>Written communication - Language to link points and ideas, language of comparing and contrasting</p> <p>Major goals are learning and applying strategies of transporting scientific informations using different techniques and analogue and digital sources.</p> <p>AP main work</p> <p>working on a scientific topic for a defined time, prepare a paper (around 12 pages) in relation to a ground water, mine water or mining/ geoscience based topic. Students have to present their topic, argumentation line and basic literature (2 to 5 scientific papers) in before they start to write the paper. Afterwards, when they have handed in the paper, they have to give a presentation/ defence talk about this topic/ paper.</p>

Competencies:	Students get a general view to understand integration of business and technology in companies. This course provides a comprehensive and integrative understanding of essential new technologies, information system applications, and their impact on business models and managerial decision making. From a managerial perspective, the course addresses an application of concepts regarding hardware, software, and data organization. The students will understand and apply basics of information systems with a focus on economic issues as well as the significance of information systems for companies and the practical information and communication technologies to increase the efficiency and effectiveness of information systems.

Institute(s):	Professor of International Resource Policy and Economic Development		
Duration:	1 Semester(s)		
Competencies:	<p>The intention of this module is to teach students the particularities of management of firms where several international markets are involved. This helps to-be-managers to prepare for the particular challenges and problems involved in the internationalisation of firms. The first part of this course focuses on explaining the existence of the multinational enterprise by generalising the theory of the firm and its characterisation on the one side and particularities of management in multinational enterprises on the other. The management part of the course analyses strategies of entry into foreign markets, including entry modes, entry timing and the location from an institutional perspective and by use of case studies. The third part of the course is concerned with the management of knowledge and R&D both within the multinational enterprise and between the multinational enterprise and its host economies. This is discussed in terms of effects of knowledge and R&D management on subsidiary development and on technology transfer externalities (spillovers).</p>

(English):			
Responsible:	Stephan, Johannes / Prof. Dr.		
Lecturer(s):	Stephan, Johannes / Prof. Dr.		
Institute(s):	Professor of International Resource Policy and Economic Development		
Duration:	1 Semester(s)		
Competencies:	<p>Students will be able to understand the implications of management of firms in the environment of developing economies. Companies involved in a region that is characterised by much lower levels of economic development face particular challenges in the management: they have to consider the implications that development strategies, both national and coordinated by international organisations and NGOs, have on their activities. Of particular relevance in developing economies is the role of natural resources that are often abundant and currently their most precious source of national welfare. Students acquire the understanding that natural resources can easily turn into a curse, if they are not included into a coherent national development policy. Those include most prominently export-oriented policies, state-aid policies and the development of national champions, the attraction of foreign direct investments, and incentive systems for outward investment.</p>		
Contents:	<p>Part I - Economic development and emerging markets I.1 Foreign exchange and economic development I.2 Reminder of trade theory and politics I.3 Characteristics of developed, emerging, and developing countries I.4 Theories of Economic Development: Overview I.5 Development Policies: Approaches, Failures, and New Consensus? I.6 The Chinese way: infrastructure for development Part II - The role of natural resources for economic development II.1 The concept of the resource curse in general II.2 The Salter-Swan model II.3 Concepts for a benign role of resources for development ("Successful resource-based development") II.4 The economics of export restrictions of depletable resources (example rare earth, other critical resources)</p>

(English):			
Responsible:	Drebenstedt, Carsten / Prof. Dr. Hoth, Nils / Dr.		
Lecturer(s):			
Institute(s):	Institute of Mining and Special Civil Engineering		
Duration:	1 Semester(s)		
Competencies:	<p>The students learn to work fully independent on a research topic. Therefore they have to use their knowledge from "Geo-Scientific Communication", mainly how to structure their work. Furthermore they will enforce their skills with respect to handling large data sets and to develop an investigation strategy from different technical points of view. So in the end they have to combine all their knowledge they got in relation to hydrogeological, hydrochemical and management aspects, as well as to deal with a general argumentation line. Additionally their team competencies and time management skills will be improved.</p>		
Contents:	Of course this depends on the detailed topic. Possible topics may be related to hydrogeological or hydrogeochemical aspects, as well as applied management or business administration questions in relation to groundwater (risk assessment studies, management concepts).		
Literature:	Depends on the research topic. For the general strategy to structure the work and how to write the MSc-thesis the acquired knowledge from "Geo-Scientific Communication" can and has to be used.		
Types of Teaching:	S1: Master thesis / Thesis (26 Wo)		
Pre-requisites:	<p>Mandatory: Themenausgabe: Abschluss von Modulen nach dieser Ordnung im Umfang von mind. 80 LP (Issue of the topic of the thesis: Modules totalling at least 80 CP according to the exam regulations have to be completed)Kolloquium: Abschluss aller Module (Oral defense of the thesis with discussion: all modules have to be completed)</p>

(English):			
Responsible:	Schlömman, Michael / Prof. Dr.		
Lecturer(s):	Kaschabek, Stefan / Dr.		
Institute(s):	Institute of Biosciences		
Duration:	1 Semester(s)		
Competencies:	The students will have obtained experience in basic microbiological methods. They are able to prepare sterile media, to cultivate microorganisms and to enrich as well as isolate pure cultures. They are able to follow the growth of cultures and to analyse substrate conversion and product formation during cultivation.		
Contents:	Working sterile; preparation of minimal and complex media; pouring of plates; enrichment, isolation and identification of microorganisms. Experiments on various metabolic properties of microorganisms (e.g. leaching of sulfides). Turbidity measurement, HPLC analyses, colorimetric determination of ions in solution.

Duration:	1 Semester(s)		
Competencies:	Students will have obtained a basic understanding of the functioning of a microbial cell. Specifically they will have obtained an understanding of the diversity of microbial energy metabolism, of the effects of microbial activities on the environment and how that can be used for the winning of metals and oil and for mine-water treatment. Students understand how microorganisms are classified into certain taxa, and they will have some insight into molecular tools for the classification and for the prediction of properties of the microorganisms.		
Contents:	Eukaryotic versus prokaryotic cell; important biomolecules (carbohydrates, lipids, proteins, nucleic acids); Basics of fundamental cell processes (replication, transcription, translation); structure of the microbial cell, microbial taxonomy and phylogeny; growth of microorganisms; principles of energy metabolism; microbial activities in the carbon cycle: energy metabolism on the example of aerobic degradation of carbohydrates; simple fermentations; aerobic degradation of alkanes; CO ₂ fixation in photosynthetic and lithotrophic microorganisms; activities in the nitrogen cycle (nitrification, denitrification, N ₂ fixation); microbial iron oxidation and reduction; microbial oxidation and reduction of sulfur compounds.

Responsible:	Höck, Michael / Prof. Dr.		
Lecturer(s):	Höck, Michael / Prof. Dr.		
Institute(s):	Professor of Industrial Management, Production Management and Logistics		
Duration:	1 Semester(s)		
Competencies:	Foremost, the module aims to convey to the student problem-solving competencies with a view to putting the student in a position to analyse the complex questions in operations management, to structure them, and to develop solution alternatives.		
Contents:	This course addresses the management of operations in manufacturing and service firms. Diverse activities, such as determining the size and type of production process, purchasing the appropriate raw materials, planning and scheduling the flow of materials and the nature and content of inventories, assuring product quality, and deciding on the production hardware and how it gets used, comprise this function of the company. Managing operations well requires both strategic and tactical skills. During the term, we will consider such topics as: process analysis, workforce issues, materials management, quality and productivity, technology, and strategic planning, together with relevant analytical techniques. This course will provide a survey of these issues.

(English):			
Responsible:	Jacob, Dieter / Prof. Dr.		
Lecturer(s):	Müller, Clemens / Master		
Institute(s):	Professor of Construction Management		
Duration:	1 Semester(s)		
Competencies:	Students obtain an understanding of the concept of project management and become familiar with important tasks in relation to the management of projects.		
Contents:	This course presents the principles and techniques of managing projects, primarily engineering projects, from the owner's feasibility study through design and development to completion. It emphasises project management during the early stages of project development because it is at that point that the ability to influence the quality, cost and time of a project is at its highest. It includes project scope definition, development of work plan, planning and scheduling, procurement strategies and highlights the management of the three basic components of a project: quality/scope, budget/cost and time/schedule. A simulation exercise is included to demonstrate working in a group and highlight the importance of communication against a backdrop of determining procurement strategy.
